DATE MAILED: 02/27/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/026,624	TSUNODA, NAOKI	
	Examiner	Art Unit	
	Dillon Durnford-Geszvain	2622 2615	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 December 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 27 December 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. Claims 1-10 are pending, claim 1 has been amended to overcome a rejection under 35 USC 112 and claims 3 and 4 were amended to overcome objections due to minor informalities.

Response to Arguments

2. Applicant's arguments, see page 1, filed 12/29/2005, with respect to claim 1 have been fully considered and are persuasive. The rejection of claim 1 has been withdrawn.

3. Applicant's arguments, see page 1, filed 12/29/2005, with respect to claims 3 and 4 have been fully considered and are persuasive. The objection of claims 3 and 4 has been withdrawn.

4. Applicant's arguments regarding the rejection of claim 1 under 35 USC 103(a) filed 12/29/2005 have been fully considered but they are not persuasive. As to claim 1, the Applicant asserts that Narayen et al. does not make up for the deficiencies of Aihara as it does not teach that a thumbnail sized image is registered in the same directory as the HTML file is registered. The Examiner would like to respectfully point out that, as stated in the previous Office Action, Aihara only lacks creating a thumbnail image from the original image. Aihara teaches in Column 10 lines 34-36 that all information associated with the HTML file including image data is stored in the same file. This would

include the thumbnail created by the teaching of Narayen et al., as it is simply additional image data.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1 and 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,223,190 (Aihara et al.) in view of US 6,035,323 (Narayen et al.).

As to claim 1 Aihara et al. teaches a digital camera device 110 which has a function for creating an HTML document file from a picked-up image (Column 8 lines 33-37) and for taking out the HTML document file through a media and communication or the like (Column 13 lines 37-41), further comprising: a unit which preliminarily registers a template in HTML format for creating an HTML file in the digital camera device (Column 3 lines 9-13); a unit which uses a tag exclusively used for inserting file of a picked-up image (Column 7 lines 22-25); a unit which automatically generates HTML codes inserting the image file in accordance with said tag (Column 7 lines 42-43); a unit which, each time HTML file created, automatically forms a new directory to register the HTML file therein (Column 7 lines 22-25); a unit which, each time a picked-up image is linked to an HTML file, therein; a unit which references the image in the HTML file (Column 7 lines 22-25).

Art Unit: ~~2622~~ 2615

What Aihara et al. does not teach is creating a thumbnail for referencing the image from the HTML file. However, Narayen et al. teaches using lower resolution images stored in a database with links to the original image as a means of referencing the images from a homepage or the like (Column 6 lines 56-64).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used thumbnails as the means for referencing the original images from the HTML file created in the camera as this would allow the "homepage" to have a smaller total size and would allow the images to be previewed before the full resolution image is accessed.

As to claim 3, see the rejection of claim 1, and note that what Aihara et al. and Narayen et al. teach has been discussed above. What neither teaches is the use of custom tags. However, the Examiner takes Official Notice that the use of custom tags was old and well known in the art at the time the invention was made. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a custom tag for inserting an image into an HTML file as taught by Aihara et al. in view of Narayen et al. as this would allow the tag to be customized to the specific application that it is currently being used in. For example, in the instant case the custom tag allows the camera to add specific information that the general tag would not be configured to add.

Note that the above rejection was made in light of the Examiners best understanding of the limitations in the claim.

As to claim 4, see the rejection of claim 1, and note that Aihara and Narayan have been discussed above. What neither teaches is automatically transferring operation to an exclusively used tag from a general use tag. However, the Examiner takes Official Notice that the use of Custom tags was old and well known in the art at the time the invention was made. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used an exclusive tag to link to the images from the HTML file as this would allow specific information to be associated with the image according to what template was being run which would allow the templates to be tailored to specific uses such as for use by a real estate agent or insurance adjustor and would attach different information for each use.

Note that the above rejection was made in light of the Examiners best understanding of the limitations in the claim.

As to claim 5, see the rejection of claim 1 and note that Aihara and Narayan have been discussed above. Aihara et al. further teaches a unit which displays the HTML document drafting template registered in the digital camera device by using a dummy image file (see Fig. 6B note the name "Script XYZ" is displayed as the template which is registered in the camera). As to "a unit which resets the exclusively-used tag section while displaying the HTML document drafting template" If one changes the template which is being used this would necessarily change the exclusively used tag which is defined by the template. Therefore this feature is inherent.

Art Unit: ~~2622~~ 2615

Note that the above rejection was made in light of the Examiners best understanding of the limitation in the claim.

As to claim 6, see the rejection of claim 1 and note that the Examiner takes official notice that the process of converting portions of an HTML code that one does not wish to use to comments and vice versa is old and well known in the art. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the CPU 344 of Aihara et al. to perform this "editing" function on the template taught by Aihara et al. in view of Narayen et al. as this would be an efficient way to add or subtract features from the template without having to load an entirely new template.

As to claim 7, see the rejection of claim 1 and note that Narayen et al. further teaches a digital camera device which each time a picked-up image is linked to an HTML document, displays the size of the image file thus linked (Column 14 lines 18-28). As to displaying the total size of image files that have been linked before, this would have been considered by Narayen et al. as it is common to display the total size of a file or transfer so as to alert the user of the size of the impending transfer.

As for a unit that enables to connect or disconnect the link of the original picked-up image to or from an image with a thumb-nail size on HTML document, Narayen et al. would have considered allowing the user to edit albums that have already been published by severing links, erasing thumbnails, or adding links. This would amount to

Art Unit: 2622 2615

simply the ability to edit the album later if the user forgot a picture or accidentally put the wrong picture in it.

As to claim 8, see the rejection of claim 1 and note that as discussed above Narayen et al. would have considered allowing the user to edit an album after it has been published and would also have considered showing the total file size of the album as the user may have to keep the album under a certain limit or may pay by the size of the album and therefore would like to know how large it is.

Narayan also teaches a unit which, after forming an HTML document, reduces the size of the original picked-up image in a uniformed manner to a desired size (Column 9 lines 46-47).

As to claim 9, see the rejection of claim 1 and note that Aihara et al. further teaches associating sound files with captured images (Column 7 lines 2-3). Therefore, Aihara et al. would have considered a unit which, each time a picked-up image is linked to an HTML document, determines as to whether or not there is a sound relation file attached to that image; a unit which, if there is any sound relation file, displays an icon indicating the existence of the sound relation file attached to the picked up image linked to the HTML document; and a unit which links the sound relation file to the display icon.

Note that displaying an icon indicating the existence of a sound file and linking that icon to the sound file are old and well known and therefore would have been considered by Aihara et al. as a means to communicate to a user that a sound file exists

Art Unit: ~~2622~~ 2615

and a method for accessing that sound file and playing it.

As to claim 10, see the rejection of claim 1 and note that Aihara et al. further teaches a unit which downloads a template file in HTML format from a predetermine home page on the Internet (Column 9 lines 40-42), by using a communication card including a modem and an ISDN card (Column 1`3 lines 52-56); and a unit which registers the template file in HTML format that has been downloaded (this feature is inherent in Aihara et al. as the script has a name and is recorded in memory and is accessible using the controls of the digital camera).

7. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,223,190 (Aihara et al.) in view of US 6,035,323 (Narayan et al.) as applied to claim 1 above, and further in view of US 6,930,709 (Creamer et al.).

See the rejection of claim 1 and note that what Aihara et al. and Narayan et al. teach has been discussed above. What neither teaches is an automatic naming convention in which the camera creates directories in accordance with DCF standard. However, Creamer et al. teaches a digital camera which is used to upload pictures to a webpage and which can automatically name pictures in accordance with a standard (Column 13 lines 9-13). Creamer et al. further teaches creating thumbnails for referencing the images and naming them with an automatic naming convention (Column 13 lines 58-66). As DCF is a standard naming and directory creation convention, Creamer et al. would have considered using DCF as the particular naming convention

Art Unit: ~~26223615~~

and directory creating standard which was to be used in the digital camera taught by Creamer et al.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have added the naming and directory creation method taught by Creamer et al. to the digital camera taught by Aihara et al in view of Narayen et al. as this would allow for a predictable method for naming images and organizing them in a particular way which is advantageous because the user doesn't have to worry about whether they are using proper names.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dillon Durnford-Geszvain whose telephone number is

Art Unit: ~~2622~~2615

(571) 272-2829. The examiner can normally be reached on Monday through Friday 8 am to 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ngoc-Yen Vu can be reached on (571) 272-7320. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
